

## **SUSP-05, Rear Sway Bar Removal and Installation**

### **Tools**

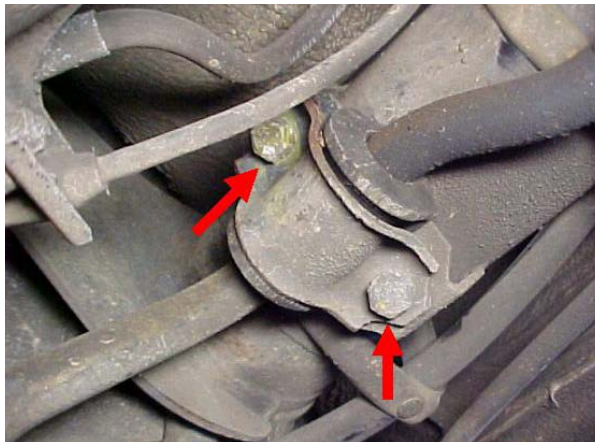

- Metric Socket / Wrench Set
- Floor Jack / Jack Stands

### **Procedure**

1. Raise the vehicle on jack stands.
2. Removing the rear wheels makes the job a bit easier but is not required.
3. Remove the two bolts/nuts on either end of the sway bar that attach the sway bar to the drop links.

4. Remove the bolts (4 - 2 on each side) that hold the sway bar to the torque tube carrier and remove the sway bar from the vehicle.

5. Installation is the reverse of removal.
